

SCOLA TELCZ – Example of Interdisciplinary Workshop

Jitka Burdová, Olga Búciová

Masaryk University, Faculty of Education, Czech Republic

Abstract

Architecture interferes with many components of life and its complexity penetrates several areas of human competence. That is why it is important to incorporate the knowledge and know-how of these disciplines, resulting in an architecture that meets functional, aesthetic and sociological requirements and respects the needs of users.

The presentation will focus on the contribution of education to interdisciplinary collaboration in architecture. It will present one of the examples of interdisciplinary and international collaboration prepared for university students, the SCOLA TELCZ project. The project aims to connect students with different architecture-related expertise and give them space to discuss and exchange experience in a specific assignment. A workshop, held twice a year, involves the National Heritage Institute in Telcz, Donau University Krems, Czech Technical University in Prague and Masaryk University in Brno. The workshop is attended by experts and students in the fields of architecture, garden architecture, art history, art education and art mediation and sociology. Students

works on their own redesign of a building or location in Telcz. Furthermore selected lectures and excursions are organised during their stay in Telcz.

Keywords

Workshop, Architecture, Collaboration, Interdisciplinarity.
