*N. Asokan and Tuomas Aura*

# Secure Systems in a Nutshell

We investigate how build systems that are simultaneously **easy-to-use** and **inexpensive** to deploy while still guaranteeing **sufficient protection**.

Examples of research questions:

- Can contextual data on user devices help improve security usability?
- How can cloud services ensure user privacy?
- How can we design secure software-defined networking?

Research Programs and funding:

Contextual Security (AoF), Cloud Security Services (AoF), CyberTrust (Tekes), Mobile System Security (Intel and Huawei)
